

# Azure Directory Management

Janne Kemppe  
2015

opiframe

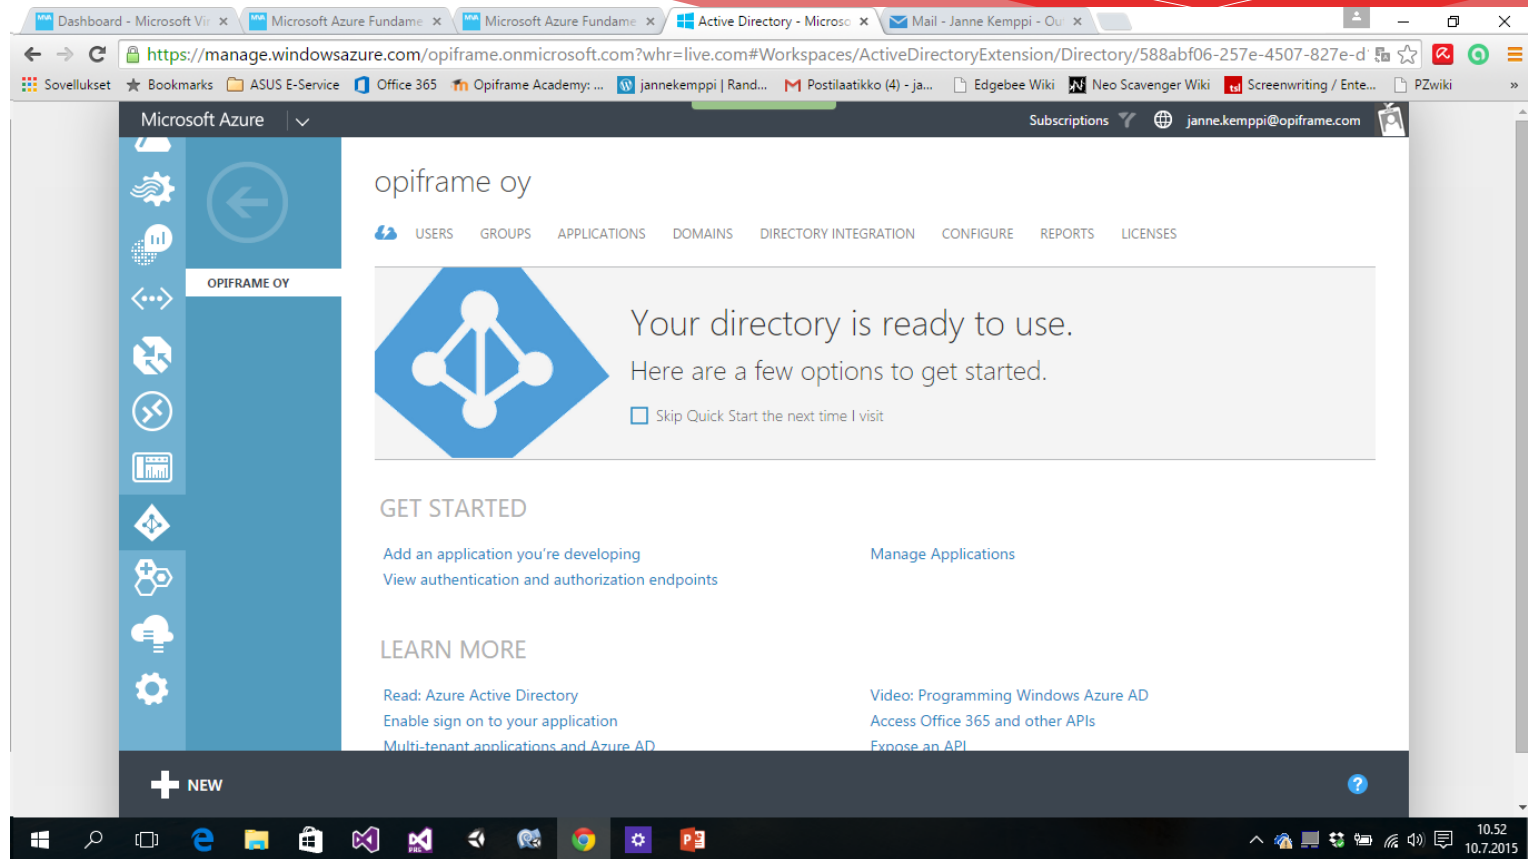

- \* Ohjattu harjoitus: Directory Management to create a custom organization email name.
  - \* Create a new directory
  - \* Map custom domain to Azure Active Directory
  - \* Map multiple custom domain names
  - \* Create new user in custom domain

- \* **Map custom domain to Azure Active Directory**

- \* 1) Go to Active directory

- \* 2) Select Directory with "→" button

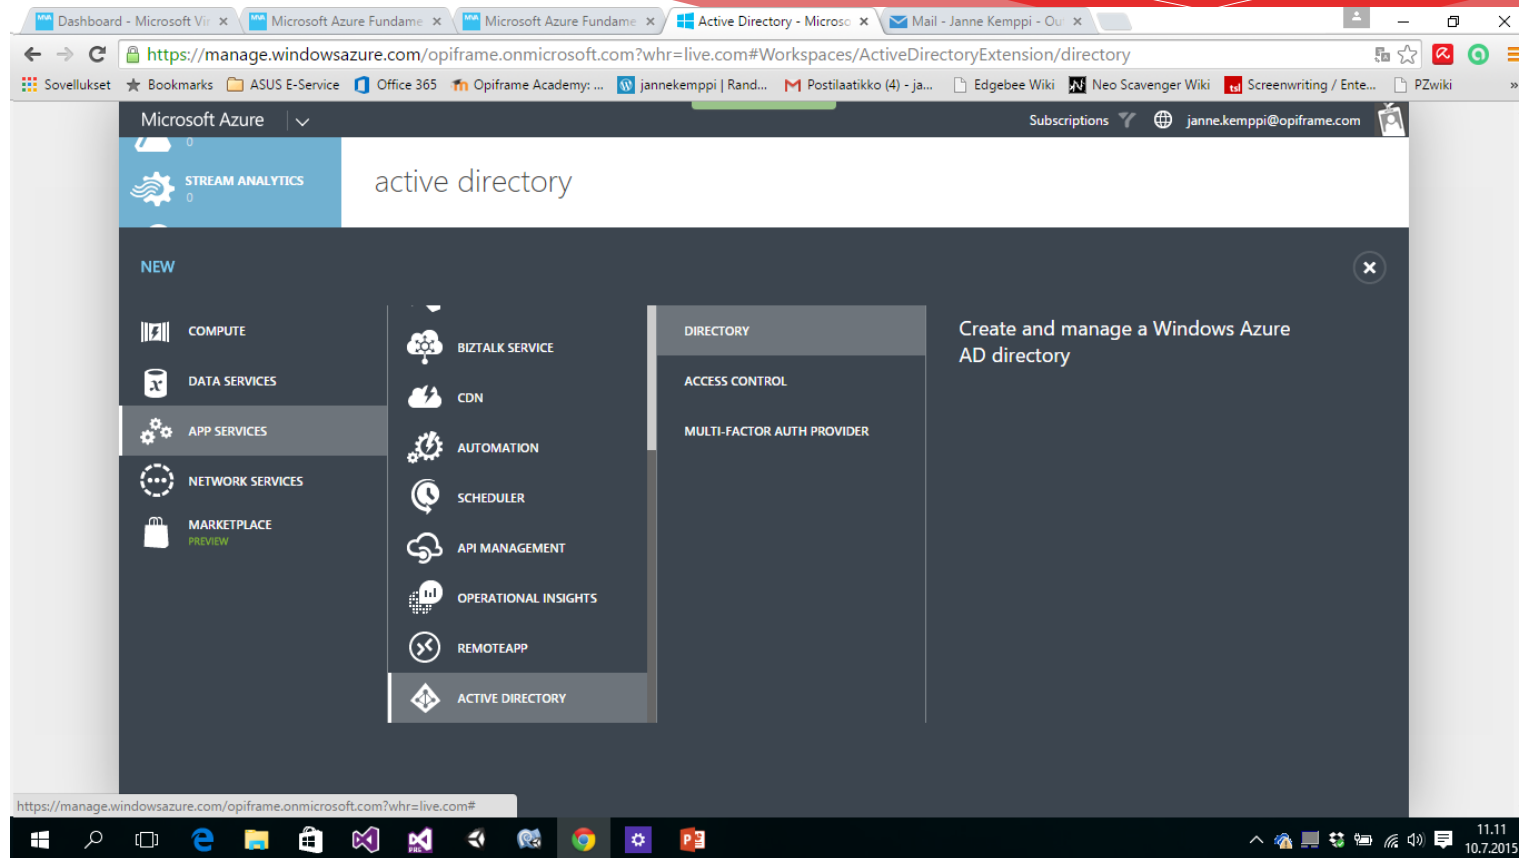

- \* This shows a dashboard view of that particular directory.

14.7.2015

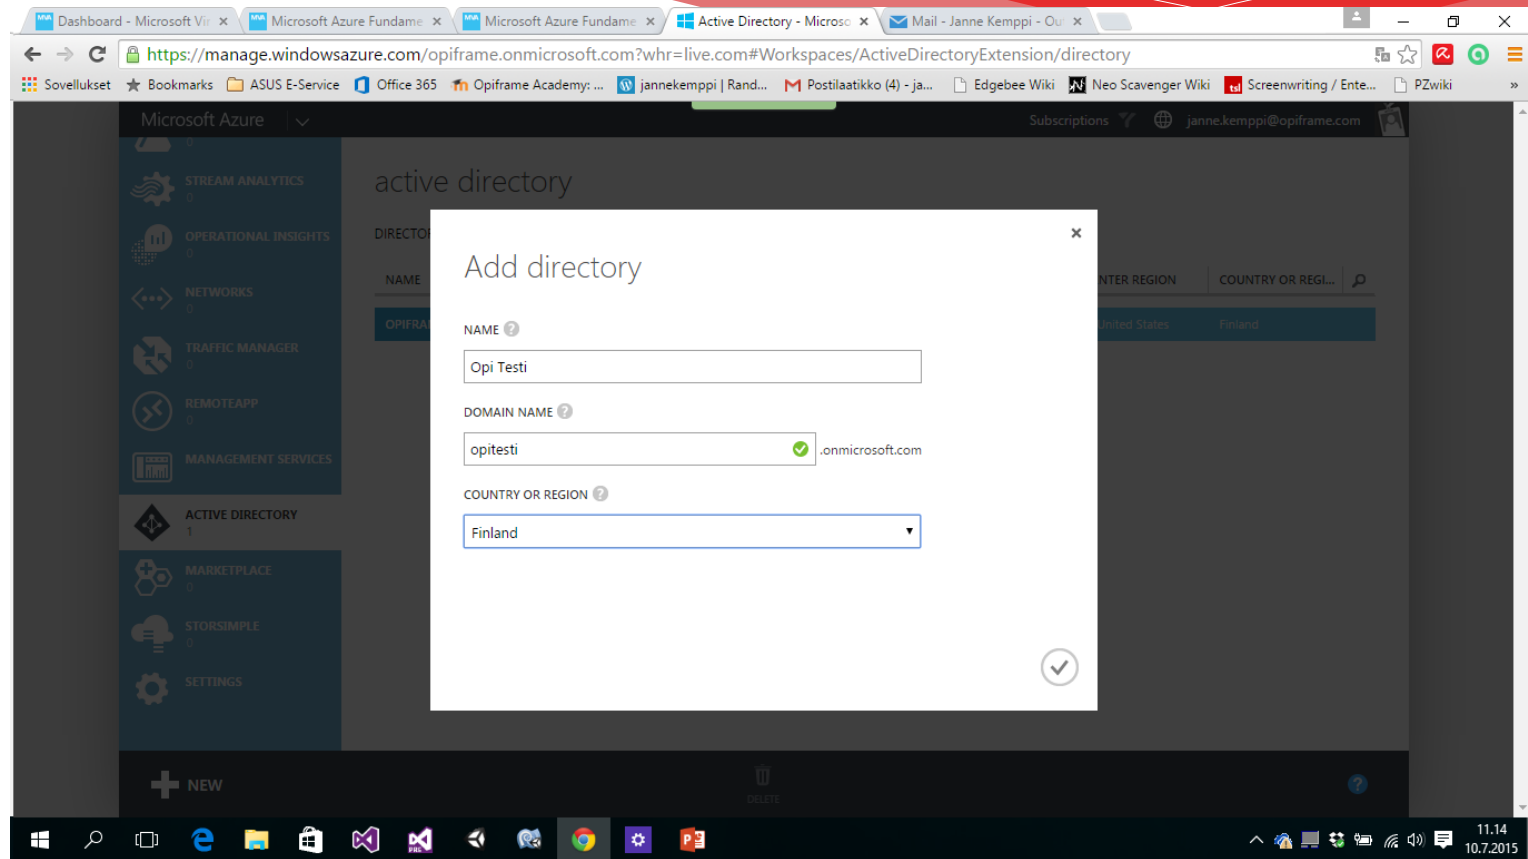

- \* **Create a new directory**

- \* 1) Select ”+ NEW” button from left bottom.
- \* 2) Choose new Active Directory → Directory

14.7.2015

- \* 3) Select "Custom Create"
- \* 4) Fill necessary data.
- \* Be careful with "Country or Region". It cannot be changed after it has been set!

14.7.2015

### \* 3) Select Domains

- \* At this point you'd add domain name "mycompany.com"
- \* You also add a TXT record to your DNS host's records which would have this data. All DNS companies have different way to do this but your IT administrator should be able to do it.
- \* Once TXT record is added it takes about 10-15 minutes to about an hour to function
